

Rivers and Lakes (Amazing Biomes)

With science, the world around us, and STEM principles all informing the value of this series, it brightly describes biomes with detailed photography with a strong concentration on the features that make them unique. Wow sidebars center are compare and contrast driven and Bio-Facts describe the interactions between humankind and the biomes. Statistics are up-to-date and both fascinating and frightening from the fact that 20 tracks of land the size of football fields are destroyed in the Brazilian rainforest every day; this contrasted with the fact that 50% of all known species are found in rainforests. Quizzes are part of the endmatter.
